

DARLOW LLOYD & SONS

Part of the Darlow Lloyd Group Ltd

CIVILS AND UTILITIES SERVICES

FOR SOLAR & WIND FARMS, BATTERY
STORAGE UNITS, HV / LV CABLE ROUTES, AND
FIBRE AND BT COMMUNICTAION WORKS

www.dlsons.co.uk

Darlow Lloyd and Sons Ltd can provide HV, LV and all service cabling, trenching, reinstatement and drainage to DNO's and other similar customers for a range of environments and locations, rural and urban throughout the UK. Our teams are fully qualified to perform both agricultural and street works projects.

Ducting and Utilities

Darlow Lloyd & sons have been carrying out duct laying and cable pulling jobs for DNO's throughout the UK for the past 15 years.

Our services provide full excavation of proposed cable route as well as the supply of specified ducting, which is laid and proved, before full reinstatement takes place. This involves backfill, laying of protection tapes/tiles and reinstatement of tarmac if required.

We lay all ducting from 96.6mm fibre/BT ducting, to class 1 160mm Emtelle ducting and even 225mm ducting. As well as working with Rigiduct and twin wall ducting.

Cable Pulling & Fibre chambers

Once DLS have excavated and reinstated our cable routes, we also provide cable pulling services.

This involves the proving/cleaning of ducts as well as the pulling. We have a variety of cable winches at our disposal, which our fully trained operators use on all of our jobs.

We pull all cables ranging from 19pr copper fibre cables, to 630mm² 132kv cables. All cables are pulled using the correct accessories, (Socks, rollers, lube etc.)

We also supply and install fibre chambers which we install prior to pulling the fibre cables, these are then used as inspection pits for future works.

Darlow Lloyd and Sons Ltd also provide a range of civils services that we offer on many of the jobs we undertake. These range from installing access tracks and soil stabilisation, to the installation of concrete formwork for bases in substations. We also offer finishings to a lot of our jobs, including stoning up areas and all drainage works.

Formwork & Concrete bases

Darlow Lloyd & Sons have recently started providing the services to produce and install all formwork and concrete for bases on site on many of the substations we have worked on.

Our scope includes the procurement of all steel which is bent to shape and fixed before the supply and lay of specified concrete which is poured into pre constructed formwork and shuttering and left to set before being removed and cleaned.

All of our formwork is constructed and installed by fully trained and qualified operatives, we provide all aspects of the work from supply, installation and finishing.

Access tracks & Stabilisation

Soil stabilisation is a well established technique which involves the use of lime, cement or other binder materials to geotechnically improve areas of weak soil into a construction material suitable for re use on site. Most soils can be stabilised for use in bulk fill applications and to build roads, pavements, embankments, reinforced earth structures, railways, housing and industrial units.

We also install access tracks to sites which are harder to get too. This works include stripping of topsoil and subsoil to required depth, then the installation of terram and geogrid, before stone is added and compacted to cap the track. Once full compaction is complete and has set our access tracks are able to hold most plants including HGV's and plant.

Darlow Lloyd and Sons was initially founded in 1965 and in 1973 it expanded to become a limited company. Since 2008 Darlow Lloyd and Sons has been a group which has helped us to diversify our business and we have continued to expand into new markets and territories throughout the UK and the rest of the World.

Over this time period and throughout it's growth, our company has still managed to retain it's core values of always putting the client first and building excellent client relations through a strong team who have a passion for success.

DLS are based in South Wales from where we deploy our Teams throughout the UK.

DLS offer the complete industrial waste management solution strategy towards true "Zero Waste".

Patented Binders for sludge recycle & reuse
Bi-Product upgrading
Waste / aggregate recycling
Landfill Management
Transfer sorting station management
Landfill site construction & mining
Water recycling

The majority of workers in our department all hold NERS accreditation and have worked on live Nation Grid and WPD sites as well as other DNO's around the UK.

Please see below the accreditations held by Darlow Lloyd & Sons Ltd:
